Project Proposal

Concept: Diabetes Information Kiosk

This proposal is for a Diabetes Information Kiosk. I attended a Diabetes Information Seminar at the local hospital last year and think that a kiosk like this could have been useful there. It could be placed in hospital lobbies and in doctor's offices. It could also be used at various local health fairs that are organized by various groups along with some simple diabetes screening. The kiosk concept could work as a stand-alone kiosk or loaded onto a laptop for use at locally sponsored health fairs. It could also be used by health care professionals in a large group format with screen projection.

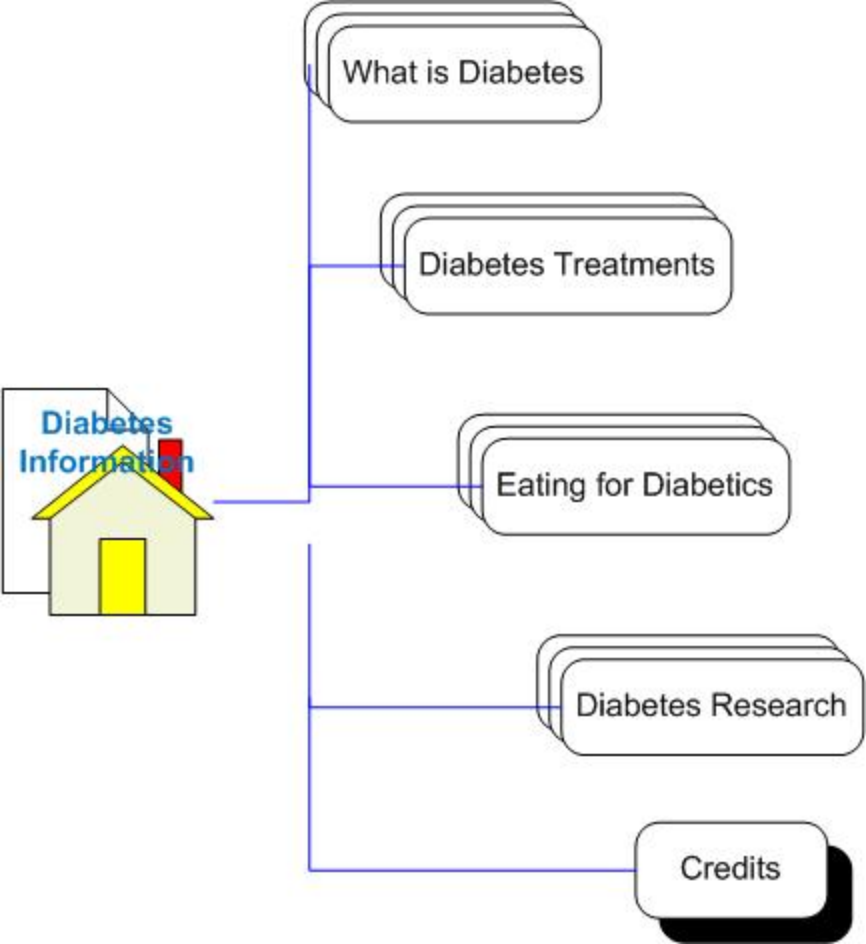

Target Audience:

The target audience for this presentation would be adults with diabetes, interested in diabetes information, at risk from diabetes or caring for someone who has diabetes.

Goals:

- To provide information on diabetes treatment and care.
- To provide diet and meal planning for those with diabetes.
- To provide recipes for delicious and nutritious meals.

- To provide information on diabetes research.
- To provide additional resources for those with diabetes.

Diabetes Information Kiosk
Screen # 1

Transition In: none

Description: This is the beginning of the kiosk program

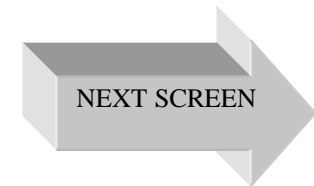

Duration: 00:00:00:00

Music: none

Narration: none unless the SOUND ON button is pushed, then the narration will match the screen
